

1. Restore hillside, stop erosion, build healthy soils

2. Plant useful trees that will:

- Restore the ecosystem
- Grow food
- Provide medicines
- Provide fuel
- Provide other benefits:
 - Cosmetics
 - Building materials
 - Habitat for nature & biodiversity
 - Shade
 - Erosion control

3. Establish a successful composting program

- Make new soil for more food plants
- Grow organic food without chemicals
- Reduce erosion
- Reduce costs of buying food
- Conserve water
- Save money on fertilizers & pesticides

4. Teach how to create & manage a sustainable land use model for nature & humans

- Teach adults & children how to make land productive
- Teach about local ecology & native foods

Native food plants of African homeland
